

Allestree. 1635.

**A New Almanack
and Prognostication,**

**for the yere of our
LORD GOD,**

1635.

And from the Creation,

**5597
Being the third from Leape
yere.**

**Collected and properly refer-
red to the Longitude and Sublimity
of the Pole Arctick, of 51 deg. 32. m.
And may generally serve for the
whole Ile of Great Britaine.**

Mutor pro temporum ratione.

By RICH. ALLESTREE.

**LONDON.
Printed by W. Stansby, for
the Company of Stationers.**

*Adhujm Libri Prognostici amici sui chariss. Mri
R. Allestree Lectorem carmen Prognosticon.*

S Telliferi secretata Poli non parua recludit,
& manifesta facit parvulus iste liber.
Vana superstitio nulla hic, ars impia nulla
ista licet rabido Zoilus ore crepat.
Cuncta Deo subsunt, Cœlumq;, Solumq;, Salumq;,
quæq; jubet facient Sidera, terra, mare:
Prima Deus causa est, causa sunt Astra secundæ,
nil, si prima veter, causa secunda valet.

H.B.

Ad amicum suum Candidum Richardum Allestree

Æthere nonne Deo placido tumidius ab alto?
Error erit levior si peccem talia fando.
Nam sapias alta: putet nemo quin astra, relictæ
Terra, summa petas, tibi quod via nota per Orbes
Volantes, non obstabunt tibi prætereunti,
Æthereq; domus, ni ut servogratificentur.
Te tamen ple precor, populo dum sicut amicus,
Illic ut serus redeas optoq; fruëris.
Vita permulto ter læta dicere menses,
Eximen ut ignoscas mihi: desine Musa canendo.

Rob. Woodford.

*Vpon what dayes the Faïres of the Bowrough of
Derby are kept this present yeere,
1635.*

The first is vpon Friday in Easter-week.

2. The fourth and fifth dayes of May.

3. The Friday in Whitsun-week.

4. The Friday before Midsummer-day.

5. The XXV. of July, being S. James day.

6. The XXV. and XXVI. dayes of September.

A necessary and perfect rule for ever to know when
the 4. Termes begin and end: and how
many Returnes are in euery Terme.

Eight dayes before a Terme shall bee,
The Exchequer openeth certainly,
Except the Terme of Trinity,
Which openeth but 4. dayes before assuredly.

1. Hilary Terme begunneth the 23. day of January (if
it be not Sunday) but then the next day after, and endeth
the 12. or 13. of February, and hath 4. Returnes.

Octabis Hilarij } } Crastino Purificationis.

Quind. Hilarij } } Octabis Purificationis.

2. Easter Terme begunneth 17. dayes after Easter and
endeth 4. dayes after Ascension day, and hath 5. Returnes.

Quind. Pasche } } Mensē } } Quind. Pasche.

Tres Pasche } } Pasche } } Crastino Ascensionis.

3. Trinity Terme begunneth the next day alwayes after
Corpus Christi day, and endeth the Wednesday fortnight
after, and hath 4. Returnes. Note that Corpus Christi day
is alwayes the Thursday after Trinity Sunday.

Crastino Trinitatis } } Quind. Trinitatis.

Octabis Trinitatis } } Tres Trinitatis.

4. Michaelmas Terme begins the 9. of October (if it be
not Sunday) and endeth the 28. day of November, and
hath 8. Returnes.

Octabis Michael } } Crastino Animarum.

Quind. Michael } } Crastino Martini.

Tres Michael } } Octabis Martini.

Mense Michael } } Quind. Martini.

In this my Calendar following you shall finde both the be-
ginnings and endings of the Termes, and all the Returnes
set downe vpon the dayes of the moneth that they fall vpon
this yeere 1635.

Dominica post Trinitatis, 20

Charles our Soueraigne King, did begin his reigne our
Great Brittain, Anno 1625. March the 27. and hath
reigned 10 yeares compleate this yeare 1635. March 28.

Veneris ingens sidus, cum ante graditur Solem
purpureus Græcis Lucifer Latinè dicitur: Cum sub-
sequitur, & ab occasu refulget, vesper vesperugo, &
Vesper appellatur.

This Golden Planet Venus is Occidentall, from the first day
of January this yeare 1635. vnto the 12. day of February,
following, and so long this yeere shée is our glittering Eve-
ning Starre, setting after the going downe of the Sunne,
and therefore termed *Hesperus*, *vel vesper*: the is that Eve-
ning Starre. And all the rest of the yeere else, shée is Ori-
entall rising before the Sun in the Morning, and therefore
called *Lucifer*, and our glittering Morning Starre and so
continuing all this yeere after.

A most plaine and easie Table shewing the true time
of the beginning, continuance, and yeares since the reigne
of each King and Queene in this Land, from the Conquest.
Within this yeare; 1635. Gathered forth of Chronicles.

The Kings names.	Began their reigne.	The time they reigned.	Since their reigne.

A true definition of naturall Astrologic by
the Authour.

Astrologia vera ac erudita physica pars est, inquirens proprietates vires, effectus ac significaciones Stellarum, quas in elementari natura & microcosmo excitant, non quidem curiose & superstitiose, sed verarum observationum & rationalis experientie testimonijs, adq; per certas hypothesas artisq; principia & Phenomena. Non principiorum naturam & demonstrationem generalem ob oculos ponit, doctrina Sphærica. Est enim calum vehiculū diuine virtutis, quod mediante motu & lumine stellarum canquam causis secundis, deorsum hęc inferiora gubernat & disponit. Non tamen necessitant absolute, sed conditionaliter, & inclinant fortiter.

In the 7. or last column of this my Almanacke towards the right hand, you haue the houre and minute of the Sunne rising for every day in the yeare at London: which houres and minutes are halfe the length of the same night. For example, the 5. of January, the Sunne riseth at London, at 8. of the clocke, & no min. after: that length being doubled, makes 16. houres and no min. the length of that night. And to know the time of the Sun-setting in the same place through the yeare, take the houres and min. found in the Almanacke for Sunne-rising the same day, and you shall haue the Sun-setting left, which being doubled, is the length of that day. Example: January the 5. day abovesaid, the Sun riseth at 8. and no min. take that 8. being doubled, and there resteth, 4. houres for Sun-set that day, the length of, being doubled maketh 8. houres the length of that day, and so of all the rest. This way is very easie. And these rules are perpetuall. Note also, that you shall finde in the 6. Column under the title full Sea at London bridge, the houre of full Sea there, at Tinsmouth, at Hartepole, Humber, Weymouth, Dartmouth, Lyme, Salton, Montbray, Antwerp, Harboure, Bristol, Lampa, and Foulmer: and it is to be taken from the New-moone to the full in the after-noon according to the houre and minute there set downe: and after the full, o exchange, it is high water at those places the same day and houre in the morning.

January hath xxxj. dayes.

Month dayes.	Week dayes.	Feast or dayes, Terme dayes and there ar. Returns.	The place of the Moone in the Zodiack e- very day at noone. More that *a*, stands for *ante*, or before noone, & *p* for *post*, after noone. Example, the 7. day of this Moneth, is a Conjunction of the Sun and Moone at 10, a clocke in the morning.

February the Moone hath 29 dayes.

The description of the Sanguine people.

The bodies where heate, and moisture dwels,
The sanguine people, as *Galen* tells,
With visage faire, and cheek's rose ruddy,
Their sleep's are much, and dreames be bloudy.

March the Moone hath 30. dayes.

The sanguine complexion.

Pulse great and full, with digestion fine,
Pleasantly contenting, both and Wine,
Excrements abundant, with anger short;
Given to laughter much, and finding sport.

June the Moone hath 29. dayes

Sleeping over much Vine growe and pale,
Spittell white and thinke, thus ends my tale,

The Chollericke complexion.

The Chollericke are hot, and drie as fire,
With leannelle of Lims, and puffed with ire.

Salup

Iuly the Moone hath 30. dayes.

The Chollericke complexion.

With coltise bellies, and little sleepe,
Dreames of fire, and wonders deepe,
With fallow colour, or cawniered,
Loving salt meats, and crusts of bred,

August the Moone hath 30. dayes.

Voyce sharpe, and quicknesse of Wit,
 Urine yellow, and saltnesse of spit,
 Pulses swift, and very strong.
 Ciuell countenance, not anger long.

September the Moone hath 29 dayes.

The Melancholicke Completion.

Melancholy is cold, and very dry,
 As heere in verse, his signes will try,
 Haire plaine, and very thinne,
 A leane wretch, with hardnesse of skinne.

The vse of this Table with a Caution.

Doe but obserue in the sixt columnne of the Almanacke the
houres and minuts of full-sea at London-bridge ouer again
each senerall day of the moneth, to or from which time there
noted, adde or subtract such houres and minuts as this
Tablet aboue doth appoint, and the totall of the one, or re-
mainder of the other shal be the time of full sea at any of these
places abouesaid, salued the Anticipation or protraction of
time, which by the winds, Land-floods, or Moones-latitude,
may be caused, which may be an houre, or sometimes more or
lesse error, according to their scite and quantity, a thing
very remarkable of Sea-men when they passe by any Sands,
ouer any barren hauen, or such like.

Allestree. 1635.

An Appendix vnto the
precedent Almanacke, for
this present yeere of Grace
M.DC. XXXV.

Wherein you may obserue a brieft
Chronology of yeeres: A De-
scription of all the Eclipses of the
Sunne and Moone, with a Type of
the totall Eclipse of the Moone in
England this yeere (if the
Aire be cleare:)

Astronomickall Calculations: a Chrono-
graphy of the foure Quarters of this yeere,
some Physicall notes, and notes of
Husbandry and Gardening

Usefull and pleasant for all those which are de-
sirous of such a worke.

By RICHARD ALLESTREE.

GOD maketh Lightning with Baine, and
bringeth the Cloudes out of his Treas-
ures: Ier. 10. 13. Thus nature is an Order
prescribed and set downe by God.

Allestree. 1635.

A Description of all the Eclipses with-
in this present yeere of Grace. 1635. With
a Type of the first Eclipse of the Moone.
Febr. 21. 21 min. after 8. at night;
if the ayre be cleere.

In this Figure or Type, the great blacke circle
signifieth the shadow of the earth, and the 4 circles
being all of like bignesse, each of them representeth
the body of the Moone: and what the lines doe signi-
fie, the letters doe shew. Suppose the Semidiameter
of the shadow of the earth in the place of this Eclipse
to be the line B. K. and the line B. D. to be the Lat-
tude of the Moone at the time of the middle of the
Eclipse from the Equiptick, marked with the letters
A. C. and the line R. D. to be the Semidiameter of the
Moone

Allestree. 1635.

Moon in the time of her Totall darknesse; and H. I. to be the way of the Moon in the time of her darknesse, and L. to be the place of the beginning of her Eclipse, and I. the ending of her Eclipse, and M. her place when shee begins to be wholly darkened, and L. her place when shee beginneth to recover her light againe. Now you see, that when shee commeth to the point M, shee is wholly Eclipsed, like as shee is also when shee commeth to the point L, and because shee spendeth some quantity of time in going from M to L, and is wholly darkened, therefore it is called a totall Eclipse with continuance. The number of Eclipses that will be this yeere, 1635. are five, three of the Sunne, and two of the Moon, howbeit none of the Sunnes Eclipses will be seene with vs in England upon our Hemisphere; but only the two Eclipses of the Moon will be totally darkened to vs in great Britaine. The first Eclipse of the Sunne will be on the 7 day of February being Saturday, according to our Iulian or English account, at 8. a clocke in the Morning: but the 17. day of the same moneth according to the Gregorian or foreigne Computation, it is to be seene in Magellanica nigh the Pole Arctike. The second Eclipse is of the Moon, (according to the before named Type) the 21. day of February being Saturday according to our Iulian or English account: but on the 3. day of March according to the Gregorian or foreigne Computation. This great and totall Eclipse will begin to be apparant to vs at 14 minutes past 6 a clocke at night. The beginning of her totall darknesse at 28 min. after 7. The middle of her totall darknesse at 21 min. after 8 a clocke. The end of her totall obscuration at 14 min. after 9. The end of all her obstricte, & full recovery of her former light againe at 28 min. past 10 at night. So from the beginning to the end will be 4 houres, 14 minutes.

The Digitts Eclipsed are 17 and 41 minute ferē. She being Eclipsed in the 14 degree, 00. min. of Virgo.

Allestree. 1635.

The third Eclipse is of the Sunne, the 8 day of March being Sunday, 30 min. past 6 a clocke at night by our English account, but the 18 day of March according to the Romane: It is to be seene in great Britaine. The fourth Eclipse is of the Sun also, on the 1 day of August, at 7 a clocke, 19 min. at night according to our English account, but the 11 day of the same month according to the Romane: it will be seene in Greenland, Yorland, &c. It will not be visible here in great Britaine. *Nihil enim nocet illis regionibus, in quibus non videntur.*

The fifth and last Eclipse this yeere, and will be very Conspicuous with vs in England (if the ayre be cleere) is of the Moone, the 18 day of August, according to our English account, but the 28 day of the same month according to the Romane. This is the totall Eclipse, and the time of her first entrance into her darknesse will be at 8 minuts past one a clocke in the morning. The beginning of her totall darknesse at 3 minuts past 2 a clocke. The middle of her totall darknesse at 37. minuts past 2. a clocke. The end of her totall obscuritie at 40. min. past 3. a clocke. The end of all her obscuritie, and full recovery of her borrowed light will be at 45. minuts past 4. a clocke in the morning. From the beginning to the end will be 3 houres, 37 minuts. The Distances of the Eclipse are 16 and 59 min. fere. The Moone in the 7. degree of Pisces, a signe of the watry triplicity, cold and moist, feminine, nocturnall, Septentrionall, Dexter, double bodied, common and Phlegmaticke. Shee being very neere the Dragons Head.

Saturne is direct from the beginning of this yeere, vnto the 3 of Aprill, from thence vnto the 21 of August Retrograd: and Direct againe from thence vnto the end of the yeere.

Jupiter is Retrograd from the beginning of this yeere vnto the 10 of March, thence vnto the 11 of December

December Direct: from thence unto the end of the
poore Retrograd.

Mars is Direct all this yeere.

Venus is Retrograd from the 22 day of Iau to the
4 of March: all the rest of the yeere hee is Direct.

Mercury is Retrograd from the beginning of this
yeere to the 5 of Ianuary: and from the 8 of Apill to
the 30 of the same, and from the 3 day of August to
the 16 of the same, and from the 27 day of November
to the 18 day of December. And all the rest of
the yeere hee is Direct.

The true apparent magnitude of the Tropica ll
yeere, in 365 dayes, is 11 scrup. 31 sec. 26 thirds.

And according to the Ptolemaicall tables, it begins
neth the 10 of March, 40 min. 3 seconds after-noon
Chronomically: at what time the Sunne entereth
the first minute of the Equinoctiall signe Aries, ma-
king equal day and night.

Direction, is the progression of a Planet accor-
ding to the succession of the signes, which is made
from the West into the East: as from Aries unto
Taurus, from Taurus to Gemini.

Retrogradation, is the progression of a Planet
moving contrary to the succession of the signes,
from East into the West, as when a Planet re-
turneth from Taurus into Aries.

Stationary, is a motion of a Planet, like a man
resting quiet, viz. when a Planet goeth forward
neither towards the East, neither towards the
West in the Zodiacke. A Planet is said to be Ori-
entall, when in morning it riseth before the Sun:
and Occidentall, is when it setteth after the Sun.

The line Eclipticke is a circ: in the very middle
of the Zodiacke, vnder the which the very middle of
center of the Sunne doth continually mooue.

Latitude in the Heauens, is the widenesse or di-
stance of the Planets or Starres from the Eclip-
ticke, (as the right line H. I. signifieth the difference

of the Moone in the Latitude from the Equinoctial
line in the Type of the Eclipse of the Moone before
either Northward or Southward.

Altitude of a Planet, is the motion of such a Plan-
et, in which it is carried from his lowest place of
Heaven, or from the center of the Earth, into
the most highest place, or into the top of his circle,
and then a planet is said to be in apogeo, that is, the
most highest point, and most remote from the earth.

The Lowlines of a Planet, is when he is pla-
ced in the opposition of his Ape, and then he is said
to be in Perigeo, and the nearest point to the center
of the earth, for these two places in which is said to
be the highest and lowest places of the Planets, are
which are named Abides summa, & ima, illa Apogeu-
um, hac perigeum.

Epicycle est vocabulum artis, bled in Astronomia
signifieth a lesser circle, whose center or middle part
is in the circumference of a greater circle.

In the upper part of this Epicycle, the 5 Planets
Saturne, Iupiter, Mars, Venus, and Mercury, doe move
forward according to the course of the signes, as
from Aries to Tau. &c. But when they are Retro-
grade, (as I said a little before) that is, goe back-
ward, as from Gemini to Tau. so from Tau to Aries.

Vac; curfu. or void of course, is when the Moone or
any other planet is separated from a planet, and not
joined to another during his or her residence in the
signe. Damage or void, is when the Moone or any
other planet is in a signe, & not aspected of another.

The Golden number or Prime, is the number of
19 yeeres, in which time the Sun and Moone make
both all the variety of their Changes, Fulls, and
Quarters.

Epact, is the 11 dayes & 3 houres, which are added
to the yeer of the Moone, being 354 dayes, to make it
equall with 3 yeeres of the Sun, which consisteth of
365 dayes & 6 houres. By the Prime is found out the
Epact,

Epact, & by Epact is found out the age of $\frac{1}{2}$ Moon.

The Circle of the Sun, is the number of 28 days, cause that in 28 yeeres, all the letters of the Dominicall letters and Leape yeeres are expired, and the 29 yeere the said Circle hath begun againe.

The use of which number is to finde out the Dominicall letter for any yeere past, present or to come.

Horizon, is a great circle, bounding that part of the heavens which we see, from the other part which we see not.

A Chronography of the 4. Quarters

of this present yeere, 1635.

The Hyemall Solstitiall, or winter Quarter doth begin Astronomically the last yeere 1634, Dec. the 12 day, 3 hou. 21 min. 49. sec. afternoone, at what time the Sun entereth into the 1 min. of the imaginary signe of solis earthy Capricorne, being then declined from the Equinoctiall according to the observation of Tycho de Brache, 23 degrees, 31 min. 30 sec. to the Southward, at which time the dayes be at the shortest, and nightes at the longest with us.

2 Equinoctium verminis the Spring Quarter, beginneth with us Astronomically the 20 of March, 40 minutes, 3 seconds afternoone; at what time 13 min. of the rising Sun entereth into the Equinoctiall at the signe Aries, making the day equal with the night, that is, betwene Sun-set, and Sun-let; and Sun-let and Sun-rise. This Quarter is naturally hot and moist.

3 Solstitium Estivum: or our Summer Quarter with us according to Astronomy, beginneth the 22 of June, 8 hou. 1 min. 5 sec. before noone at what time Mundi oculus, or the eye of the world entereth into the 1 minute of the imaginary cold and moist signe Cancer, then making his greatest Northern declination, at which time (in England) is our longest day and shortest night in all the yeere. A. A. est.

veluti

veluti equus, qui omnis ad maturitatem perducit.
A Autumnall Equinoxiall, our Audiance of Harue
 must with the brightness according to Astronomy,
 the 14 day of September, 7 hour. 13 min. 27 sec. at
 terneone, Helios, or Luk publica mundi entereth the
 milk. of Imaginable. For, mayst, capere Signe Libræ
 which maketh againe our nights and dayes equal,
 of alior, as on the 16 of March before.

Anatomy of wonder great I speake,

and yet am dead,

Men sucke sweete iuice from these blacke veines,
 which mother wilddome bred.

Prefages of weather, by the Raine-bow.

A Aristotle lately, Met. 3. Chap. 5. his duplex est,
 Solis & Lunæ. Illa frequens est, hæc rarissi-
 ma. But let every one that readeth this, asseruain
 himselfe for truth; this in the yeere 1632. The
 16. being Sunday at night, betwixt
 6. and 7. a clocke after Sun-setting; when the
 Sunne was gone downe, off of our Horizon, 1.
 hour. 30. minutes: my selfe and another Gentle-
 man did see a very faire Raine-bow, just oppo-
 site against the Moone, the being East and by
 South, the Bow being West and by North, we
 had much small misting raine and much winds for
 many dayes after. For the naturall signification
 of the Raine-bow is every whit fixed to shew
 Raine either past or to come: for if it stay or abide
 in the mid-day or noone-treed (which it cannot doe
 except in the night) ther giueth warning of very
 great raine to come. But if the be seene in the East,
 the giueth warning of thin and small raine to come
 shortly, (and so it did) but if it be seene in the East,
 the signifieth raine past by and by, and that it will
 quickly cease, and faire and cleare weather to come.

Allestree, 1635.

Alij sic efferunt: If the Raine-bow be seene before noone, she sheweth the matter of raine to be continued: If she shall be seene after noone, or soone after noone about 1. or 2. a clocke, shee declareth that raine is at hand, for because that the vapours be not as yet dissolved or waisted. If two Raine-bowes appeare at one time, they give warning of raine within 1. or 2. dayes after. A Raine-bow presently after long raine, sheweth faire weather presently.

Predictions of weather, according to holy Scripture.

1. **A** Cloud rising out of the West foresheweth a Raine, Luke 12. 34.

2. And when yee see the South wind blow, ye say, there will be heat, & it cometh to passe, Luke 12. 35.

3. When it is Evening, ye say, It will be faire weather: for the skie is red, Mar. 16. 2.

4. And in the morning, It will be foule weather to day, for the skie is red and lowing, Mar. 16. 3.

5. South winde or great heat in the Summer, foresheweth whirle winds, Job 37. 9.

6. Winde in the North predicteth cold weather, Job 37. 9.

7 The North wind driueth away rain, Pro. 25. 43.

8 The sweet influences of Pleiades or 7. Stars in the 24. and 25. degrees of Taurus, with the Moon touching raine, and the Sunne with Orion in the 17. degree of Gemini, Job 38. 31. bringeth drought.

Astronomical Elections briefly described for administration of Physicke.

Salomon saith, To every thing there is a season, and a time to every purpose under the Heauen, Eccles. 3. 1.

Loving Reader, I wish thee to loyn & compare my booke is 3. 1. with this present, & you shal get light for this your purpose, which you cannot get in any one Almanack yet extant. Sed vt ad rem redeam. In the administration of Physicke, are chiefly to be observed 3. things, viz. the time, the age, & the manner

of administration. For the election of time, consideration is to be had both to the Moon in the Zodiacke: & if it be not in extremity, either of heat or cold; & therefore, Hippocrates part 1. 6. & 46. aphorisme, saith, That Spring & Autumn are more profitable for physick, then Summer or Winter: for in Summer the humours boyle, by reason of heat some yeers, of causing great annoyance to mens bodies: yet if necessity bidge to take Physicke in summer, it is best to conceit, to be taken by vomit; & in winter (if necessity do require) by Purgation. And as the famous Philosopher Hermes saith in his Iatro-mathematikes, Luna verò stella (sive) benefica sive malefica fuerit viri se applicuerit, illi suffragabitur: Concerning the age, you are to vnderstand, & decrepit old age, & infants, are unfit to haue Physicke administered vnto them: And it is also dangerous in youth: for as a learned Physician saith, He that taketh much Physicke when he is young, will much repent it when he is old.

And lastly, for the manner of Physicks administration, Albumasars iudgement is, that the fittest times for Purgations, are to be elected according to the motion of the Moon in watry signes, as in Cancro, Scorpio, & Piscibus.

Some hold opinion, that the first halfe of Libra and Aquari are fit times: And also when the Moon is boyd of course (which is alwaies to be found in my Almanacke exactly) it is an indifferent time to take purgatiue medicines.

Prepare humours,
Womit,
Purge by Sneezing,
Take Glisters,
Take Gargillines,
Stop runnes & flux
Warte for diseases,
Purge with Electaries, Potions, or Pilles, the
Moons in Cancro, Scorp. or Pisc.

 aspect of } is good to purge Phlegme } Phis.
 } is good to purge Melancholy }

Note also that Venus bee not combust (that is, when she is within 15. degrees of the Sunne, either before or after him:) And the Coniunction, Quar- tile, or Opposition of Saturne, Iupiter, or Mars, either to the Moone or betweene themselves, for they hin- der the operation of Physicke. Use no purging me- dicines when the Moone is ioyned with ♃: for the effect thereof will be abated by reason of Iupiter be- ing hot, and moist; in which quality consisteth the vigour of life and nature.

The learned Physician will consider the Aspects of the Planets, and some fixed Starrs within the Moone, and diuers other obseruations Astro nomi- call, for the necessary & conuenient administration of Physicke. In regard whereto, and of thine owne bodily health and strength, I wold thee that thou refuse not his counsell, lest thou repent with, Had I wist.

And note generally, for Phlebotomy a speciall helpe sometime in administration of Physicke; that it is not conuenient either for a very leane or fat manly man, nor a child of 14 yeeres, or an old man a- bove 56 to be let blood.

For the } Plegmaticke, } The } Ariete or Sagia.
 } Melancholick, } Moone } Libra or Aqua.
 } Cholericke, } being } Cancro or Pisc.
 } Sanguine, } in } either of them.

For

For his Youth, from the change to the 2 quarter
age, let Middle age, from the 2 quarter to the full
blood Elder age, from the full to the 3 quarter
in Old age from the 3 quarter to the change.

Tempus Anni, Spring good, Autumn indifferent.
As concerning the time of the yeere, wherein blood
should be let; it is not a little to be regarded, for all
such as are subject to incur these sicknesses and dis-
eases following, namely: Apoplexiam, Epilepsiam,
Phrenitidem, Vertiginem, Podagram, Tussim, Scabiam,
Anginam, Pleuritidem, Ophthalmiam, Febres, Rup-
tū Venæ, Inflammationes Viscerum, &c. Item quibus
retinentur ac si sunt vagationes sanguinis con-
stet, vel Hemorrhoides, & menstrua. All these ought to
be let blood, chiefly in the Spring time. But here
also must be used discretion and consideration, for
not in all these sicknesses, neither in every of these
persons, ought blood letting to be used, but in such,
and to such, as necessity requireth. And according to
the learned, the very hot or cold times of the yeere
must be regarded in opening a veine: for saith Hip-
pocrates, Aphor. 1. li. 4. Sub calis & ante canem, dis-
siles sunt medicationes.

Tempus. The Moon in Tau. Gem. Leo. Virg. Cap.
mensis. The day before nor after the change of full
blood. 12 houres before and after the Quarters
blood. The Moon in Iupiter, or Saturne aspect.
Tempus diei, the Morning after Sun rising fasting.
After noone, after perfect digestion: The airo Tem-
perate, the wind not South, if it may be.

In these aspects following you may safely open a veine
if the Moon be in Tau, or Leo, or Virg. or Cap.
if the Moon be in Iupiter or Venus, not combad.
if the Moon be in Iupiter or Venus, not combad, if
the Moon be in some good sign.
First prepare, & then purge, Auger stabili purgare
make the body clean before you can hope to do any good.

Allestree. 1639.

An Unguent of Plaster is best applied, when the Moone is in the Imaginary signe attributed to the member whereunto it is applied.

Certaine briefe Rules for Husbandry, Gardening, &c. superstitiously attributed to the Moone, moving vnder the 12 signes of the Zodiacke.

The promises considered in my booke, 1630. The best time to plant, and graft in, is in the increase of the Moone in Tauro, Aquario, or Capricorne: and not affected by ♄, ☐, or ♀, of Saturne, or Mars.

Good to sow all manner of Corne, the Moone in Cancer. Sow Onions and Leekes, in February or March, at the wane of the Moone.

Sow Cabages in February, March, or April, in the wane of the Moone: replant them in the decrease.

Sow Cabage, Lettise in February, March, or July, in the ebb of the Moone.

Sow seeds whose rootes be round, 2 or 3 dayes before the fall, but to sow for Use, take the increase from February to Iune. Gather Apples and other fruites, berries and flowers, to have them in most beauty, and greatest vertue, the Moone at the full. Sow or set Garlicke, Lettise, Parsnips, Carrots, Pease, and Beanes, two dayes before or after the full Moone.

Good to set all kinde of Dutch-set, from September, till March. Dung your Land, that weeds may not abound, in the last quarter.

Fell Timber for building, from Midsummer to Christmas, in the wane of the Moone.

Cut Cornes or fowell, in the first quarter of the Moone. Cut Wines in February or March.

Remoue trees the last quarter of the Moone, betweene Hollantide and Twelfside.

Good to lib or geld Cattel, when the Moone is in the Head, Thighes, or Knees.

An

**An Abstract of a direction, concerning
Real Contracts.**

WHosoever shall desire to purchase or put to Sale, to take a Lease, or let to Farme, to Grant, Assigne, Exchange, or otherwise to Contract, Deale, with or for any Lands, Lease, Rents, Annuities, Mansion-houses, Offices Saleable, or other Estates of what yeerely value soever, or to save any such from danger or Forfeiture, through the want of present money: May either in their owne names, or in the name of any other trusted by them, have secure meanes with all privacy requisite for the speedy effecting what shall be desired, in any the Cases aforesaid, or the like: At the Porcht-house against Saint Andrews Church in Holborne
